CJM1.5-8M-L3 Series DC Cylinder-shaped Proximity Sensor

<p>Introduction</p> <ul style="list-style-type: none"> ● Inductive proximity switch is a device for realizing the non-electrical measurement by inductive winding or the change of coefficient of mutual induction. ● It has high resolution and accuracy for the monitoring and measurement of presence, movement and position of metallic objects. ● The operating distance of the sensor depends on the coil's size as well as the target's shape, size and material. ● It is divided into two categories according to the working state : NO - Normal Open type, NC - Normal Close type 	<p>Features:</p> <ul style="list-style-type: none"> ◆ Equivalent to the same type of the other brands (P+F and TURCK). ◆ Power supply reversal connection protection; short-circuit protection, can directly connect with PLC ◆ Newly added current over-load protection; the elements are made of imported chip ◆ Long service life, high reliability and strong resistance property to environment ◆ Red LED indicates that it's available to detect the sensor operating state ◆ Full thread shape to enlarge the installation space; can use wrench and clamp directly ◆ Countermeasure to improve the housing intensity and to solve disconnection ◆ IP67 protection structure(IEC specification)

Remarks:

- Inductive proximity sensors detect the metallic objects.
- The detection distance may fluctuate with the different materials of the detected target. Custom design in the different rated input current and the output voltage are available.
- Both the configuration parameters and the cable length can be customized. Standard cable length 2M.
- If no explicit requirement for the output polarity, the proximity sensor will be supplied based on NPN mode.

WARNING : Incorrect wiring may cause damage to the sensor.
